The Invisible Shield for LLMs

Adapt AI with **100% data privacy** and threat protection.

## Real-time Inspection

Closed security layer that  
checks every AI interaction

## Hybrid tokenization engine

Replaces sensitive data with secure  
tokens

## Threat protection

Block prompt injection,  
jailbreaks

# The opportunity, why now?

## 1. Market Trends shifting

From "AI Experimentation" to Full-Scale AI Production

## 2. Strict Regulation

Governments mandating strict oversight and accountability for AI data handling and security.

## 3. Consumer Trust

Customers and employees now demand "Privacy-First" AI interactions

# Why we WIN?

No one combines real-time data masking with full deployment sovereignty.

## What sets us apart

### 01

#### Tokenize, don't just block

Others block sensitive prompts, breaking workflows. We mask PII inline — AI still works, data never leaves raw.

### 02

#### Fail-closed architecture

If our layer fails, requests stop. Competitors default to fail-open — a breach waiting to happen.

### 03

#### On-prem & air-gap ready

Every competitor is cloud-only. Regulated sectors — banking, defence, gov — can't use them.

# The Vision

## Q2 2026

Launch V2.0 with On-Prem support and VPC deployment options for high-security sectors.

## 2027

Expand to Multi-Modal security: File, Image & Audio PII masking

## 2028

Establish SecurePrompt as the global standard for AI Data Sovereignty and Governance.
